The KEYMACRO board is the ultimate input device for computers, allowing you to enter fast and accurate keystrokes using a minimal amount of time, through a compact and easy-to-use design. Let's start with the good aspects. The board is incredibly portable, since it fits in a small, compact, red plastic case, which also features a "naked" typeface. The layout of the board is intuitive and uncluttered, being made up of a sturdy, metal base and a compact keyboard with smooth rounded edges. The board is designed to be easy to hold in the hand and operate. The default layout of the keyboard features all the most commonly used keys, in alphabetical order, and it can be changed by using the Keyboard editor. The keyboard of the KEYMACRO board is a full QWERTY keyboard, including accented and special characters, which are most likely going to make your life much easier when you are working with text files and programming. The board also includes several basic function keys, including volume up and down, mute, as well as function keys for screen brightness and volume control, besides additional navigation keys for moving around the screen and exiting the program. The two mouse buttons are positioned at the bottom of the keyboard, allowing you to move the cursor around the screen with one hand and easily access the keyboard keys. The base of the KEYMACRO board is an angled piece of plastic, which provides the board with excellent stability and allows you to move it easily, even if you hold it in your hand for extended periods of time. Even though the KEYMACRO board is very portable, it has a built-in lithium battery, which is going to help keep your board powered for a long period of time without having to worry about a depleted battery. This is a Bluetooth keyboard, with its two buttons mapping to the dual mouse buttons on the bottom of the board, allowing you to navigate the screen in any program that supports this feature. The KEYMACRO board also features a USB slot, allowing you to connect your device to the board, to share files and transfer data from the board to your computer. There are a few downsides with the KEYMACRO board, as well. First, you can't remap any of the keys on the board, unless you buy one of the accessories that is not sold in the official kit.
