I was wondering if anyone knew of a class out there that would do the job? I can't seem to find any and the validation classes seem to only fit the WPF DataGrid's ModelValidationErrorEventArgs which I am trying to avoid. Thanks! A: Try this class: /// /// The class that implements the ValidationEventArgs for WPF /// public class ValidationEventArgs : ValidationEventArgs { /// /// Initializes a new instance of the class. /// /// /// The control that originated the validation. /// /// da6ecb0b54

For example, you can now draw:Surface filled and unfilled curves and arcs of size:Curves and arcs of size:Changes to the 2D Wireframe Features for AutoCAD 2Dallow you to select the size of the polygon and polyline elements for which 2D Wireframe will automatically create a polygonal or polyline model to help you visualize the dimensions and placement of your parts. With the new model features, you no longer need to manually sketch your parts to generate a wireframe visualization. You can now automatically create a visual reference of your designs. The models are automatically created and displayed for you when you need to sketch the part that you're working on. You can also assign these models to workplanes or viewports to automatically create a wireframe visualization of your design. Paint and Erase Colors with the Edit Feature Use the Edit feature in the Paint and Erase Colors palette to quickly and easily apply solid colors to parts of your drawings. For example, you can change the color of the background of a selection or change the color of the background of a selected part to quickly indicate the type of information you're working on. The Paint and Erase Colors palette contains a variety of colors to use as you work on a drawing. You can select a color using the Apply to Selection or Apply to Layer Colors to apply a specific color to only the selected or active part of the drawing. You can also use the Paint and Erase
