In this article, it is not possible to cover all of the bells and whistles of Adobe Photoshop Elements 2021 because there is more to it than just editing photos. The program was designed to be a simple tool for photographers and videographers to scrapbook and record memories, but it has the ability to create video. Users can easily remove backgrounds, add titles, titles, and sound, and share creations via social media. The program has added a few new tools, including Live Sharpen, Aged Tone, Move the Crop Mask, and adjust Equalize. The best part is that Photoshop Elements comes bundled with Lightroom 5, a professional-level image organizer and editor. *Editor's Note: If you have purchased the latest version from an Apple retail store, you will need to make sure it has a passcode. To find out the passcode, go to "System Preferences > Security > Passcode Lock" in Mac OS 10.14.3.* For details, refer to the image below. Lightroom has so many different features available to the user that it seems daunting to know where to start. For those that like to see what they're going to edit right from the start, Lightroom may not be the ideal program. For instance, when you download new images into Lightroom without removing the old collection, you are creating duplicate sets. To avoid this, you should go to "Organize..." and then "File Organization." Part of the organization is how you should save files you purchase for future editing, as well as CDs and DVDs. Another is how you should name images.

As I am an immunologist, often I get to help design and create public health programs. Today I am sharing with you a new design that I made recently that I was proud to put into use, especially to my college students who were immune compromised for my Public Health program. It is based on a mental health online survey that we ask people with autism and parents of children with autism about their perception of stigma related to their disease. This online survey is a

great instrument to start to have a conversation about stigma and educate people about the disease to come! This proof of concept has been published in the **ACMD** conference in Canada. This is the methodology behind how we have built the tools to start a conversation and reach to the parents of children with autism around their needs and likelihood to engage in social capital. I am delighted to share this new design with you! It was built with Kinetic.js, Adobe XD, After Effects, Photoshop, Illustrator, and InDesign. Hope you enjoy it! 933d7f57e6
