NDoc For PC

Written in .NET. Generates documentation for a .NET assembly. Generates the XML documentation files as well as class library documentation, web service descriptions, web pages, command line help, and more. Produces documentation for multiple languages, including C#, VB.NET, and Delphi. Treats different programming languages as unique languages within the same documentation. Produces code documentation for common code models. Supports numerous Visual Studio versions. Generates XHTML for any number of languages, including C#, VB.NET, Java, and C++. Has a built-in FxCop plug-in that automatically finds and fixes code violations. Supports XSD, WSDL, and XSD. Supports DDL generation, making it easy to generate new database schemas. nDoc is able to generate HTML Help 2, Microsoft Help 1.0 and Online Help from the same assembly. nDoc is able to automatically publish documentation through VS 2005 and Web Service Description generation for web services without having to build the wsdl. nDoc is able to generate Command Line Help from an assembly. nDoc has a sample application included that demonstrates some of the functionality of nDoc. You can generate your own documentation with nDoc using either a ndoc.config file or the command line. You can also use the nDoc.HelpMaker to generate documentation in other languages. There is a GUI version of nDoc that allows you to modify the settings of the nDoc system. nDoc can generate: HTML Help 2 documentation (.chm) Microsoft Help 1.0 documentation (.hlp) Online Help (.chm) Microsoft Help 2 documentation (.html) MSDN Online help (.asp) Debug-mode help (.asm) Online-help (.asp) HTML Help (.html) C# Documentation (.html) VB Documentation (.html) Delphi Documentation (.html) Java Documentation (.html) Command-line help (.asm) C++ Documentation (.html) DDL generation XML Documentation nDoc System Requirements: .NET Framework 1.1 or higher Microsoft Help SDK .NET Framework Help Maker .NET Framework 1.1 or higher Visual Studio

NDoc Crack + Product Key

KEYMACRO is a tool that provides a quick and easy way to define configuration settings for the build process of an application. KEYMACRO's key/value pairs are used to provide environment-specific information to the build process. It can be used to set the output file names, paths, project and solution properties, and so on. You can set both the .NET Framework and application-specific settings. KEYMACRO is designed to be used as a framework to add/update configuration settings to your application. A configuration file and a configuration manager are shipped with the application, which should help you get started. Another important feature is that the command-line tool has no dependencies on the Microsoft .NET Framework. This means that the application can be used for applications built using either Microsoft .NET Framework or Mono. KEYMACRO is free, open source software. Use it if you want to build applications that use a configuration file. GETKEYMACRO Description: GetKeymacro is a simple utility that retrieves the configuration settings of an application for use in a configuration file. Because the original.config file is treated as binary data, the file format is not necessarily the same as what's read by GetKeymacro. Although it is recommended to use GetKeymacro to update configuration files, the original configuration file is still used when the new configuration file doesn't work as expected. Also, GetKeymacro does not validate that the configuration data is valid. Use with caution. SPECIAL KEYS /* * Extended configuration file * * This configuration file should only be used when the configuration is spread out across more than one file. * Each line represents a configuration setting. At the end of the line, use the '#' character to comment out * the setting. (The '#' character should only be used when the configuration is split across multiple files.) */ # The path of the directory that contains the application # default: %LOCALAPPDATA%\Microsoft\NET Framework Setup\NDP\v4.0\ #default: %LOCALAPPDATA%\Microsoft\NET Framework Setup\NDP\v4.5\ #default: %LOCALAPPDATA%\Microsoft\NET Framework Setup\NDP\v4.5.2\ #default: %LOCALAPPDATA%\Microsoft\NET Framework Setup\NDP\v4.6\ # 2edc1e01e8

NDoc [Win/Mac]

Example: ndoc.exe filename.exe Parameters: filename.exe: Path to the .exe to be documented. Example: ndoc.exe /? Parameters: /?: Show this help menu /help: Show the ndoc.exe help menu /classlist: Show the list of class files in a folder /h: Show the HTML help menu /index: Show the HTML help index page /filelist: Show the list of file names in a folder /s: Show the source help menu /source: Show the source code help menu /v: Show the Visual Studio help menu /w: Show the Windows help menu /xml: Show the XML help menu /hx: Show the XML Help help menu /chm: Show the chm help menu /xsd: Show the XML Schema help menu /css: Show the CSS help menu /vss: Show the Visual Studio SDK help menu NDoc Version: Examples: ndoc.exe filename.exe Parameters: filename.exe: Path to the .exe to be documented.
