Mom and pop grocery stores stock a variety of fresh produce, meats, and dairy. But with the rise in online shopping and the popularity of large chain grocery stores, is there a future for independent grocery stores? Independent grocery stores can often offer better prices, because there are fewer buyers and sellers in the market. And they often provide fresh products like meat, cheese, and produce that are difficult to find on the supermarket shelves. Rising grocery costs are one of the main reasons many independent grocers have closed their doors. But Walmart, Target, and other large chains have filled the void. Now, there's a new player in town: Fresh Market. The privately-held online grocer is the latest attempt to bring fresh products to independent grocery stores and help shoppers save money. Fresh Market is currently present in nine states, but its plans to expand nationwide are unclear. Despite the growing competition, there are still independent stores that continue to succeed, and in some cases, thrive.

The Future of Fresh Market Fresh Market has faced a rocky start since its October 2017 debut. The CEO resigned and the former head of marketing for Target has been hired as the company's CEO. The company has struggled to expand beyond the Midwest. It currently operates in Minnesota, Michigan, Illinois, Indiana, Ohio, Virginia, Pennsylvania, and Massachusetts. But the company announced that it plans to open one location in California. A recent ranking of best grocery retailers by consumer group Food Marketing Institute (FMI) showed that the top three most reputable grocers are Amazon, Walmart, and Costco. They are followed by Aldi and Kroger. Fresh Market ranked dead last. The potential nationwide expansion is cause for skepticism, considering the history of other online grocers. Fresh Market isn't the first online grocer. The company's direct competitor, Peapod, has struggled in recent years. In March, the company's founder and CEO filed for bankruptcy, and its brand was acquired by The Fresh Market. Online groceries may have a future, but they still face many of the same challenges that their brick-and-mortar counterparts face.

Challenges to Expanding Grocery stores need to have a stable and reliable supply of inventory. As more people shop online, the chances of having products become outdated are greater. Delivering food to customers isn't the only challenge. Retail stores have to compete with other stores that are open later and allow customers to pick up their groceries
